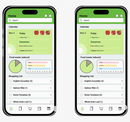
A interactive way to manage your food waste



Task:

Create a mobile app design that focuses on a domain/problem and the app provides a way to lessen the overarching problem people experience.

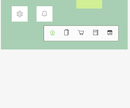
Type: Team Project

Members: Narinder Singh, Alyssa Cheng, Hedia

Tools: Figma

Overview:

We focused on the domain of food waste, incorporating many features to overcome to mental toll of food waste. Including a inventory, so you can track and manage what you currently have, a shopping list that gives you notifications if it sensor like you might purchase to much, a recipe book where you can import your recipes and find ways to use leftovers or what recipes would be best suited with what the user has in their pantry. Lastly we included a in app calendar where you can view your upcoming meal plans, add meal plans, and see how your inventory changes overtime based on your like adding to your shopping list with the add button, or checking your notifications with the notification icon. Overall our apps main intention is to lessen the guilt attached to food waste and the mental load of planning meals and keeping track of your pantry.



Home Screen Description

We wanted our home screen to be easy to access through to other features, styled like widgets that you can click into. Having your current calendar be showcased so you can see what's coming up right when you open the app. I really pushed forward the idea of having the colours and icons feel fun and childlike but sophisticated. So it wouldn't feel like using our app was a task but a nice environment. I think all together everything meshes well and is pleasing to go through and navigate to what you want.

Calendar can be seen in month, week, or day view.

The colours are meant to be calming and not seem like a stressful overfilled calendar.

Though still kept up to date with reminders

Near Best Before Food

We wanted to have our app function with the utmost more ease, so you can upload something manually or scan a receipt if you need to update whats in your inventory. These features will hopefully make people feel way more comfortable using the app and want to consistently use it.

Research

Questions we considered

- What do people base their purchasing decisions off of?
- When/why do people throw away ingredients/food?
  - (eg. is it based on the best before? or smell/appearance)
- interview people on how they track groceries and expiry dates currently
- observe common food waste patterns in households

- reduce household food waste
- want to reduce food waste/ consumption but are not sure how/ want more options
- save money by buying smarter
- learn to plan meals effectively
- support sustainability and eco-friendly habits

key notes

- reduce household food waste
- want to reduce food waste/consumption but are not sure how/want more options
- save money by buying smarter
- learn to plan meals effectively
- support sustainability and eco-friendly habits
- make or do things independently
- Portion management
- Time efficiency
- making an environmental impact

Wireframe Process

We started out by all sketching out rough wireframes of the chosen functions we wanted our app to consist of, we looked at each other after we had all drawn them and started to write down what layout we liked most for each page and what to incorporate from each of our ideas and in what order

Using Personas

Megan
Age: 25
Occupation: Nurse
Hobbies: Reading, Yoga, Cooking
Goals:
Reducing food waste to save money
Simplifying meal planning
Avoiding stress and guilty with leftovers
Wanting to feel good about her choices
Frustrations:
Forgetting what she bought last week
Feeling stress and guilty with leftovers
Wanting to feel good about her choices
Wanting to make sure no "waste" is made
Feeling like she should be more eco-friendly
Forgetting what she bought last week
Feeling stress and guilty with leftovers
Wanting to feel good about her choices
Wanting to make sure no "waste" is made
Feeling like she should be more eco-friendly
Wanting to make sure no "waste" is made
Feeling like she should be more eco-friendly
Wanting to feel good about her choices
